

RefShare Now Available

New RefWorks module provides dissemination / publishing solution for databases

Bethesda, Maryland, USA – RefWorks has just introduced RefShare, a new module providing users with a quick and easy way to share their RefWorks databases. RefShare allows subscribing institutions to make available central, customizable Web pages where users can post their RefWorks databases or folders. The databases are easily accessible from the site; users can also easily share access to this information with anyone via e-mail.

“RefShare is a specific response to the wishes of RefWorks users for a component to enhance collaborative research,” said Tina Long, Vice President, RefWorks. “RefShare empowers users, allowing them to disseminate RefWorks references not only with members of their own institution but also globally with any researcher having Internet access.”

Benefits of RefShare include:

- Facilitating dissemination of information by having a central Web page for the posting and access of research information
- Providing a collaborative research environment using the capabilities of easily accessible data via the Internet
- Enabling the seamless sharing and exchange of information
- Allowing easy transfer of information between RefWorks databases
- Providing the ability to centrally post frequently-needed databases of materials for research queries, class assignments, or research review
- Providing easy remote access to research and collaboration globally

RefWorks provides complimentary trial access to RefShare; contact refworksinfo@csa.com
Additional information about RefShare is available at www.refworks.com.

About RefWorks

RefWorks was founded by a team of experts in the field of bibliographic database management. They are dedicated to providing a high quality, yet affordably priced product for the academic, government, and corporate communities. RefWorks supports over 460 online databases covering a broad range of subject areas. The collection is compatible with some of the world's most prestigious services, including CSA, BioOne, EBSCO, ISI Web of Science, OCLC, and ProQuest, to name a few. A full list of the services and specific databases covered, along with other product information, can be found at the RefWorks Web site (<http://www.refworks.com/>).
