MICROFABRICATION IN BIOLOGY AND MEDICINE

✓ **MOLECULAR APPROACHES IN PEDIATRIC MEDICINE**

1

Abstract Microfabrication uses integrated-circuit manufacturing technology supplemented by its own processes to create objects with dimensions in the range of micrometers to millimeters. These objects can have miniature moving parts, stationary structures, or both. Microfabrication has applications in biology and medicine. These applications fall into four categories: cell biology, biochemistry, tools for cell biology, medical devices, and device structures. Sometimes microfabrication can enable devices with unique and enabling qualities are conferred when microfabrication

Revolutions in the Earth Sciences: Continental Drift, Impact and other Catastrophes

Wolf Uwe Reimold
Museum for Natural History (Mineralogy), Humboldt-University in Berlin, Invalidenstrasse 43, 10115 Berlin, Germany e-mail: uwe.reimold@museum.hu-berlin.de

This is the story of changing paradigms, regarding the understanding of our planet and its position in space – of geocentric heliocentric views, but mainly in the earth sciences, over the last several centuries. This is also the story of the revolutionary. It is the story that begins with the Greek philosopher Aristotle's Cataclysm Theory, and then followed plate tectonics, and now Catastrophism, incorporating the nature of impact cratering.

SERIAL DRAMAS: TRANSMITTING REAL-LIFE THERAPY

I have long believed in the potential value of soap operas ("Soap Opera: Catalyst to Communication," Oct.). I would even say that there is therapeutic value in soap operas, especially for the lonely, isolated, and withdrawn.

By demonstrating creative problem-solving approaches, as well as the ability of people to change and possess both positive and negative characteristics, soap operas can provide some people

tion, nursing dependency and social circumstances (using screens employed by medical social workers) will provide economists and health service researchers with a comprehensive set of patient variables upon which the health care system can be more accurately modeled. Those seeking control of hospital costs would do well to more fully describe patients' circumstances that contribute to health-related expenditures.

TRANSMITTING REAL-LIFE THERAPY

I had a modified radical mastectomy last year. Because I am also a Registered Pharmacist, I fully appreciate what is meant by "Continuing Education," and the high quality of your presentation. I particularly enjoyed "Sensations After Mastectomy" (Sept. CE). I participate in a post-mastectomy support group jointly sponsored by the American Cancer Society and the YWCA, and I have suggested this excellent topic for a future program.

----- Abstract -----

Rational models of risk-averse consumers have difficulty explaining limited annuity demand. We posit that consumers evaluate annuity products using a narrow "investment frame" that focuses on risk and return, rather than a "consumption frame" that considers the consequences for lifelong consumption. Under an investment frame, annuities are quite unattractive, exhibiting high risk without high returns. Survey evidence supports this hypothesis: whereas 72 percent of respondents prefer a life annuity over a savings account when the choice is framed in terms of consumption, only 21 percent of respondents prefer it when the choice is framed in terms of investment features.

 Abstract

Data mining and knowledge discovery is described from pattern recognition point of view along with the relevance of soft computing. The concept of computational theory of perceptions (CTP), its characteristics and the relation with fuzzy-granulation (f-granulation) are explained. Role of f-granulation in machine and human intelligence, and its modeling through rough-fuzzy integration are discussed. Three examples of synergistic integration, e.g., rough-fuzzy case generation, rough-fuzzy c-means and rough-fuzzy c-medoids are explained with their merits and role of fuzzy granular computation. Superiority, in terms of performance and computation time, is illustrated for the tasks of case generation (mining) in large scale case based reasoning systems, segmenting brain MR images, and analyzing protein sequences.

Keywords soft computing - fuzzy granulation - rough-fuzzy computing - bioinformatics - MR image segmentation - case based reasoning

저널명(Full): Journal of Biochemistry and Molecular Biology

초록:
The water and methanol extracts of Artemisia argyi showed significant cytotoxicities against J774A.1 cells but not so much against leukocytes. The cytotoxicities were found to be dependent on the extract concentration and the incubation time. The concentration and methanol extracts inhibiting 50% of cell proliferation (IC₅₀) were estimated to be 44.2 mg/ml and 71.6 mg/ml, respectively. In the case of Artemisia argyi water extract, total superoxide dismutase (CuZnSOD and MnSOD) activities of media, cytoplasmic and mitochondrial fractions of J774A.1 cells increased in accordance with cytotoxicity. MnSOD was found to be the main component of enhanced total SOD activities, particularly in the mitochondrial fraction. In contrast to SOD, catalase and glutathione peroxidase (GPx) were not found in the mitochondria.
