0		
	It's easiest if you have two "instances" of your browser open – one on RelWorks (where you'we logged in already) and the other directed to the online database service you want to search.	
0		

What about importing files from online database services that don't have a direct import to RefWorks?

No problem. Let's use NLM PubMed as our online database service example.

It's easiest if you have two "instances" of your browser open -- one on RefWorks (where you've logged in already) and the other directed to the online database service you want to search.

Do your search first.

Select the references you want to use by clicking on the check boxes.

You need to tell RefWorks which online database service your references are from. RefWorks uses "filters" to read the tags. Every online database service uses different tags, so there are specific filters for each one.

You can also view a list of all the filters and databases.

Select the name of the online database service you're importing from (in this case it's NLM PubMed).
