RefWorks has several different ways to generate your bibliography.

We will cover three...

- Write-N-Cite allows you to include citation placeholders while writing your paper (in Microsoft Word) and then generates your bibliography specifically on those citation placeholders.

- One line/Cite View is for users who do not use Microsoft Word as their word processor. It also allows you to include citation placeholders in your paper and format your bibliography.

- Format a Bibliography from a List of References allows you to quickly create a bibliography using a folder of references or all your references.

Also, at the end of each section, you will have the chance to practice generating bibliographies.
